

Our UV Resin Finish  
holds up no matter  
what your customers  
bring to the table.

## Our UV Resin Finish...

- Offers 250% more durability than any other standard industry finish
- Resists everyday abrasion from books, papers, and writing instruments
- Repels most food and beverage stains
- Prevents discoloration from strong light and temperature variation
- Tough enough to withstand harsh cleaning solvents and even nail polish remover
- Maintains its luster even after years of steady use
- Is applied using an environmentally friendly process

# Abrasions and stains can take a heavy toll on fine wood furniture.

The ModuForm Companies' Ultraviolet (UV) Cured Resin finish protects your furniture better than any other on the market. We are one of the few furniture manufacturers in the U.S. that uses UV Resin, a rich-looking, extremely durable finish that is permanently bonded to the wood with ultraviolet radiation.

*Our commitment to durability—and to the environment—runs very deep.*

### Test after test prove UV's durability:

**The Bell Adhesion Test:** Our finish didn't chip or flake when subjected to indents from a medium ball-point pen.

**The Taber Abrasion Test:** When abrasive wheels were passed over our finish at 250 grams of pressure, it withstood 250% more abrasion than conversion varnish.

**The Hoffman Hardness Test:** When an 8mm ball-shaped cutting edge was dragged across our finish, it withstood 1,600 grams of pressure before showing any visible scratches.

**The UV Light Exposure Test:** Placed 12 inches from a UV light source for 48 hours, our finish showed no significant yellowing.

**The Edge Soak Test:** When left in a pail of water for 48 hours, our UV Resin finish showed no water damage or discoloration.

**The Cold Check Test:** Subjected to temperature extremes, moving from 100 degrees to minus five degrees in ten, one-hour cycles, our finish showed no discoloration or peeling.

### UV Resin protects your furniture—and the environment.

The ModuForm Companies have been pioneers in preserving the balance between technology and a healthy environment. Our UV Resin finishing system is a perfect example of this commitment:

1. Our special Flat Line System utilizes 100% solid finishing material. Zero percent escapes into the atmosphere!
2. Our Electrostatic Disk System is one of only two in the country. This method charges the coating so that it is attracted directly to the wood surface, virtually eliminating waste and organic emissions.
3. Ultraviolet light "dries" the finish so there is no evaporation. No chemicals are released into the environment.
